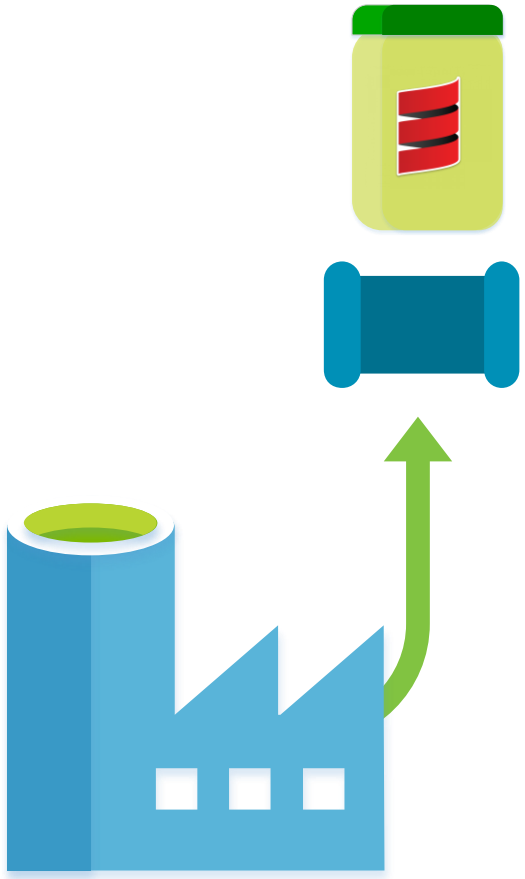
Mapping Data Flows – Expression Builder



Visual Expression Builder

Currently working on: year

Filter...

All | String | Math | Date | Logical | Input

abc md5(ANY expression)

123 nextSequence()

abc regexExtract(abc string, abc regex to find, ANY match group 1-based index)

regexMatch(abc string, abc regex to match)

abc right(abc string to subset, ANY number of characters)

```
toInteger(trim(right(title, 6), '()'))
```

Extract a matching substring for a given regex pattern. The last parameter identifies the match group and is defaulted to 1 if omitted. Use `<regex>`(back quote) to match a string without escaping

Examples
1. regexExtract('Cost is between 600 and 800 dollars', '(\\d+) and (\\d+)', 2) -> '800'
2. regexExtract('Cost is between 600 and 800 dollars', `(\d+) and (\d+)`, 2) -> '800'

OrderHeader
Columns:
22 total

Join1
Inner join on OrderHeader and OrderDetails

Aggregate1
Aggregating data by 'SalesOrderNumber' producing columns 'OrderLineCount'

sink1
Export data to ADWOrderLineCountTable

OrderDetails
Import data from ADWSalesOrderDetail

Add Source

Only gives you a General Purpose cluster

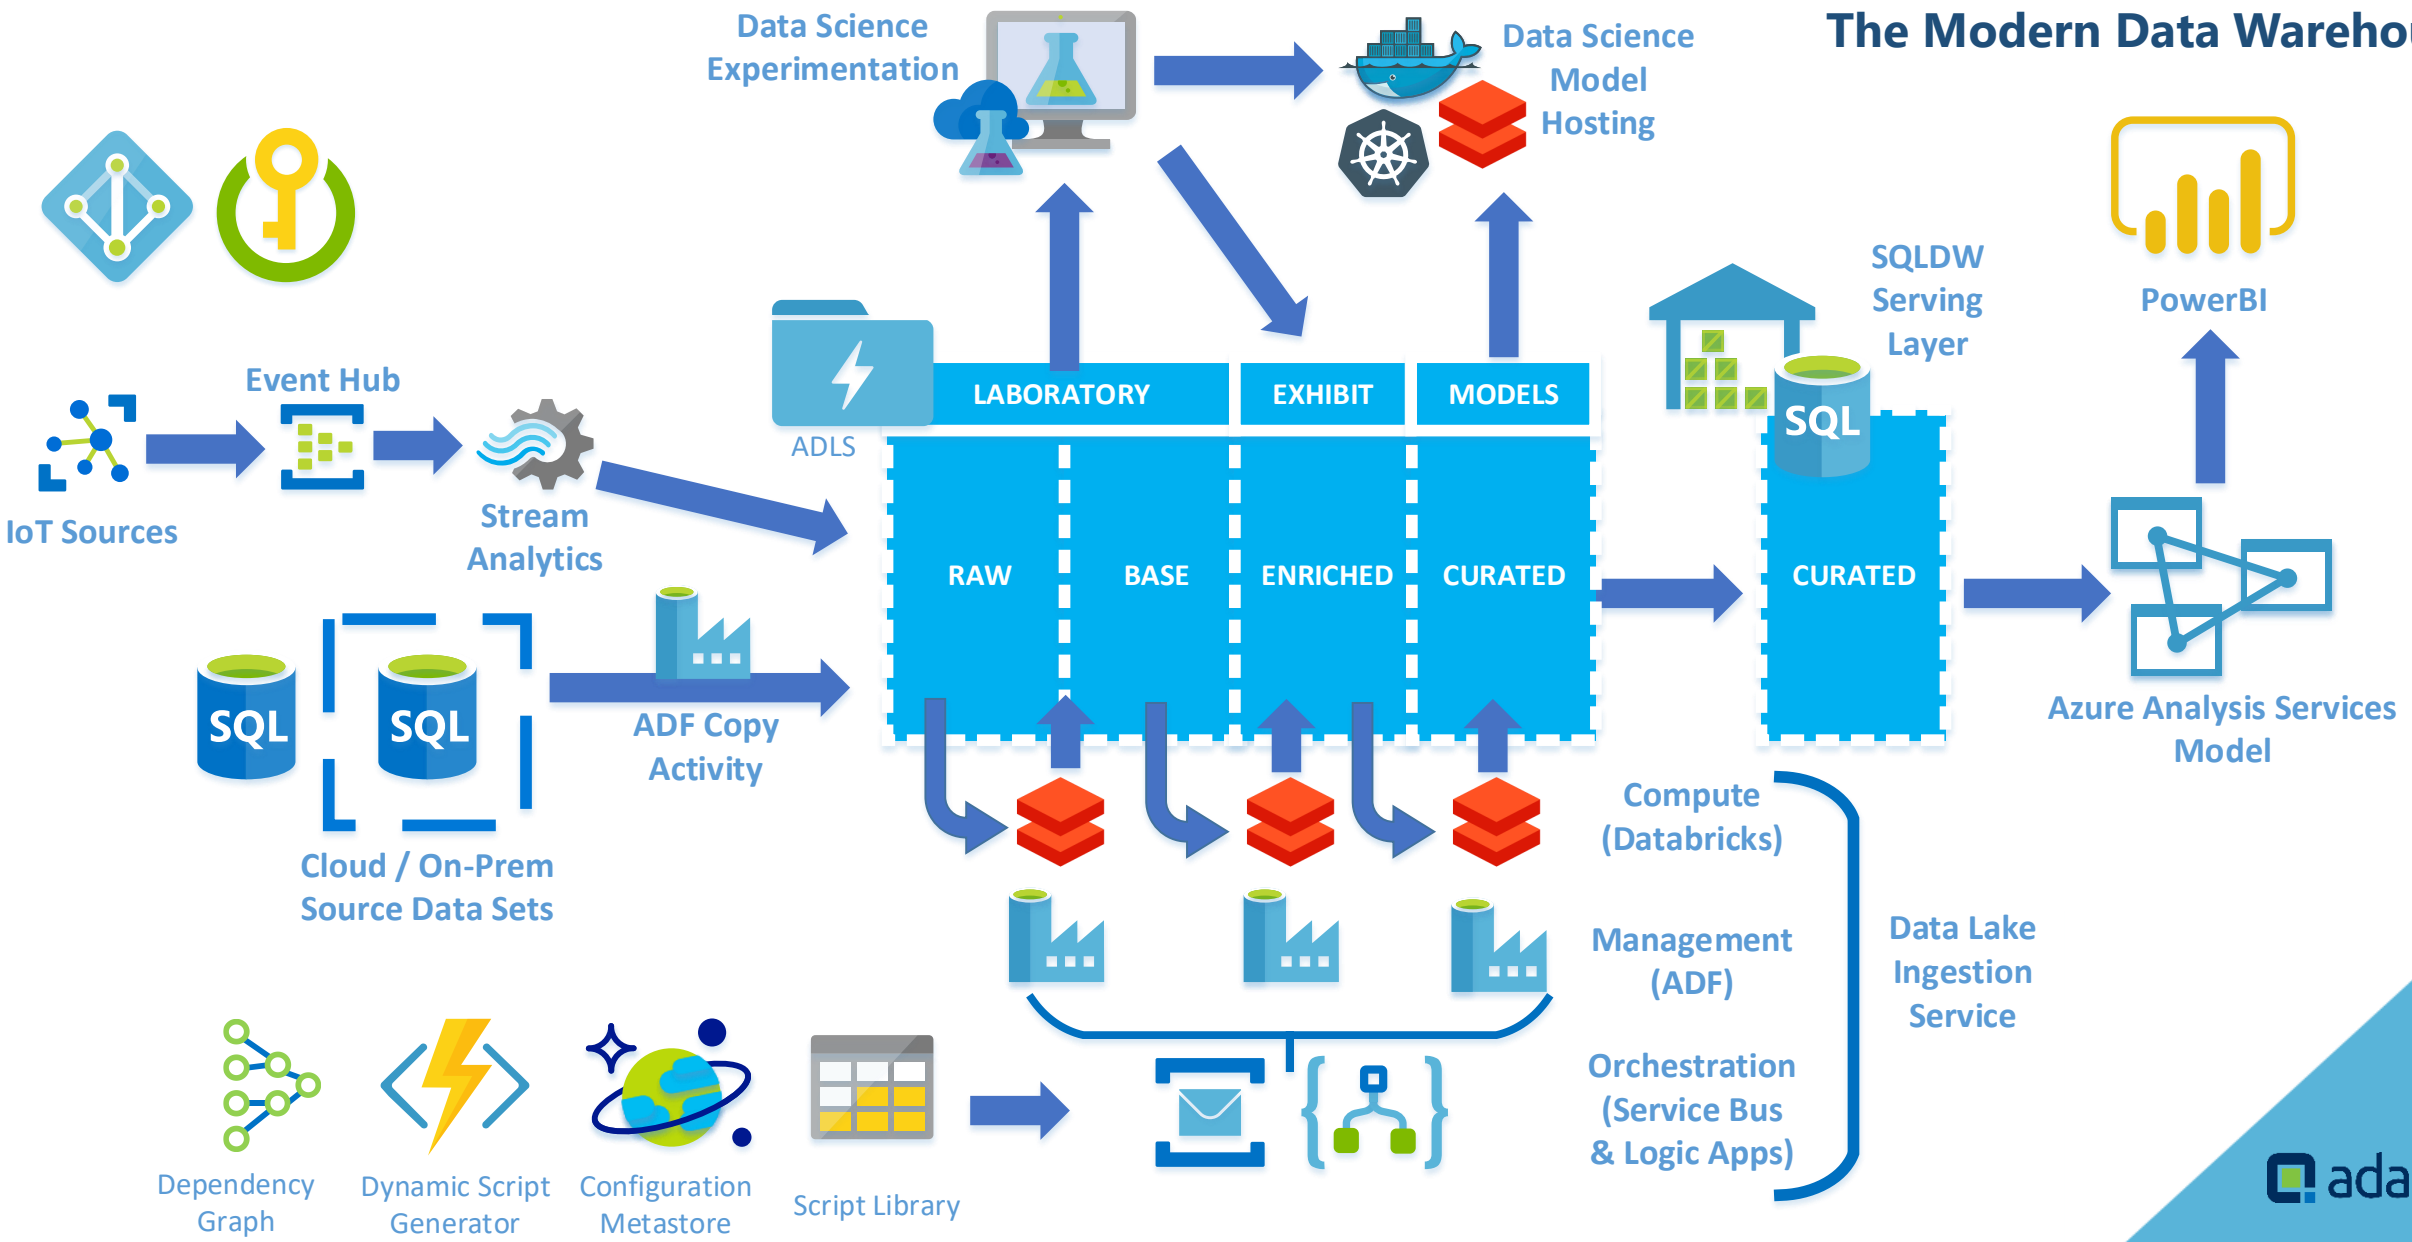
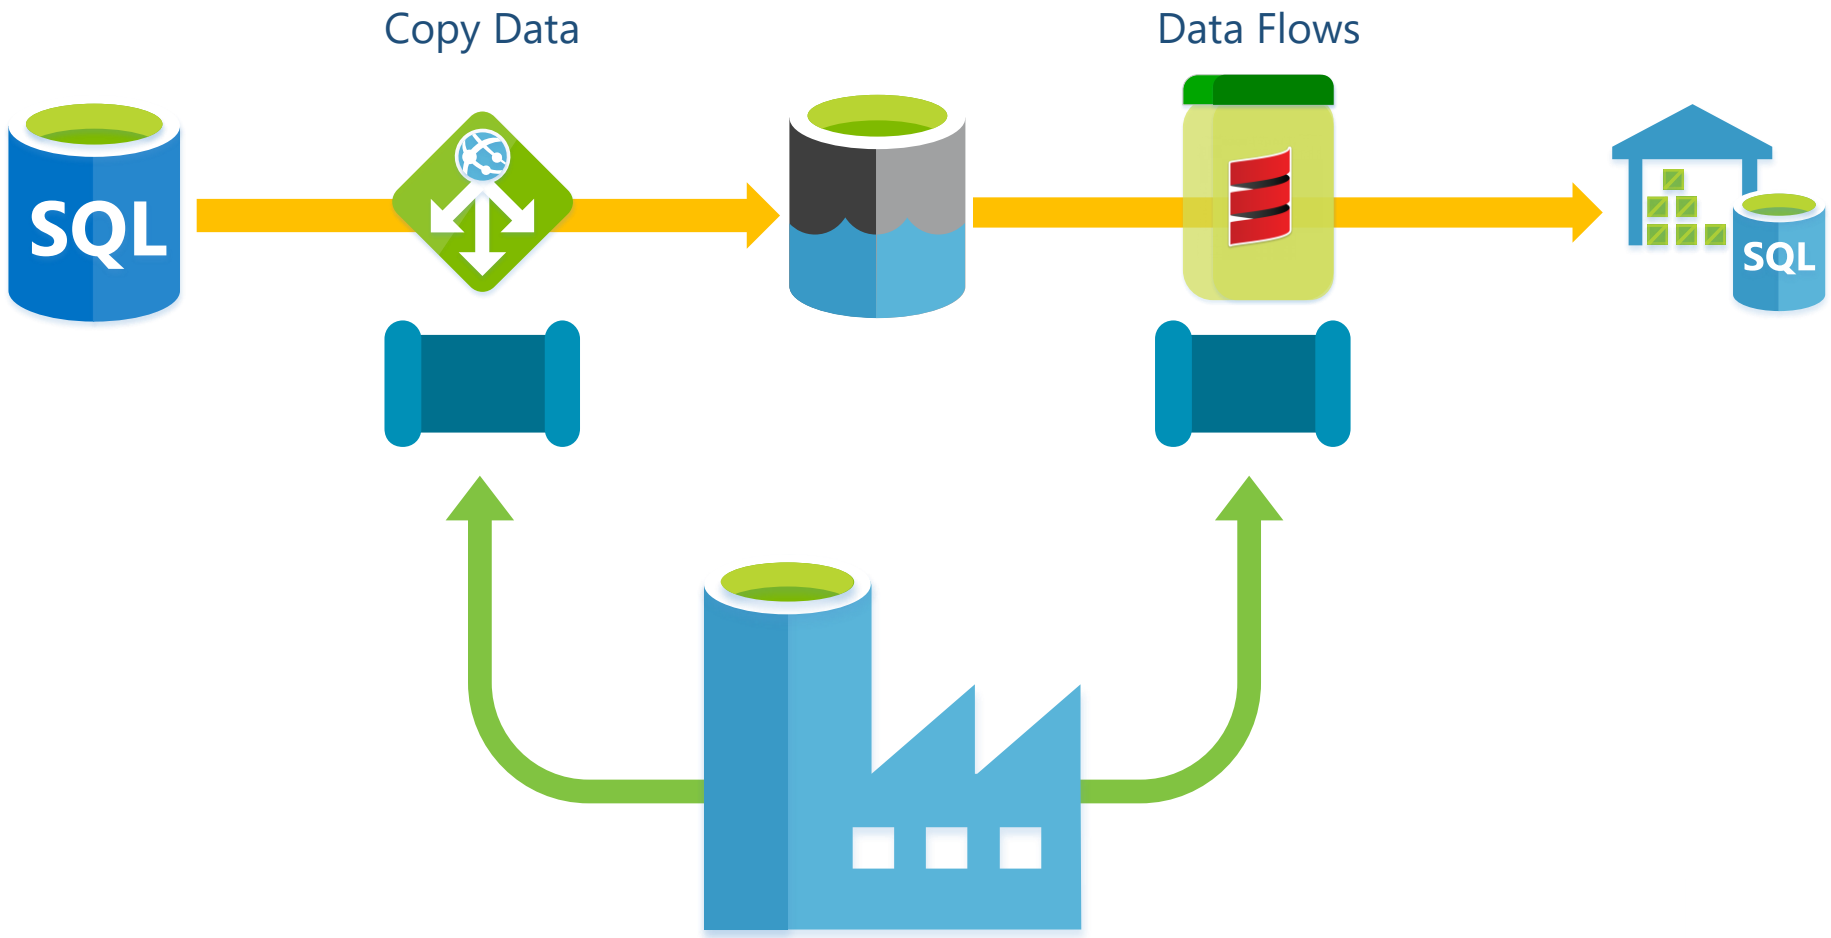
Why use Azure Data Factory?



adatis

What is Azure Data Factory?



Orchestrator of our solution Control Flow operations.
Orchestrator of our solution Data Flow transformations.

… using cloud native technology in Azure and now with a user interface for both.
